2 4.5 Examples of UMT Use Cases

3 4.5.1 SNMP-over-IP-over-UMT

4 Figure 7 presents the example of mapping between SNMP-over-IP to SNMP-over-IP-over-UMT.
5 Individual fields with white background are mapped from the SNMP-over-IP packet to the SNMP-over-IP-
6 over-UMT packet without any changes. Fields with gray background either receive a new value
7 (Destination Address, FCS) or are inserted into the SNMP-over-IP-over-UMT packet
8 (UMT_EtherType, UMT_Subtype_IPv4, or UMT_Subtype_IPv6). Note that the example in Figure
9 7 applies both to SNMP carried over TCP and SNMP over UDP.
