Section 4.5 explains the concept of P2P and P2MP LLIDs. But the distinction between these two types is not possible at an ONU. Instead, ONUs differentiate between bidirectional and unidirectional LLIDs. This is not explained at all in this section.

Replace the entire section 4.5 with the material presented in tf3_2306_kramer_2_llid_concept.pdf.

| #2 | Type: TR | TF: TF4 | Clause: 11 | Page: 192 | Line: 1 | Commenter: Glen Kramer / Broadcom |

| Comment Status: Proposed | Response Status: AIP | Commenter Satisfaction: None | Category: - |

Clause 11 Security-oriented mechanism currently points to DPoE spec that is not applicable to 802.3ca architecture. The clause needs to be re-written.

Accept file tf4_2306_kramer_1_clause11.pdf as a replacement material for clause 11. This is not a complete clause yet, but provides the outline and includes several sub-clauses worth or material.
