

14.4.1.1.2.4 ObjectInstance field for UNI Port (0xD6/0x00-03)

When the ObjectType field is equal to 0x00-03 (UNI Port), the *Object Context* TLV identifies one of the UNI ports available on the ONU. The value carried in the ObjectInstance field when the ObjectType field is equal to 0x00-03 (UNI Port) shall be as specified in Table 14-129.

Individual UNI Port instances are numbered sequentially and start from 0x00, with the maximum value equal to N , where N is the total number of UNI ports present on the given C-ONU. When the value of ObjectInstance field equals to N , it represents all the UNI ports.

Table 14-129—Structure of the ObjectInstance field for UNI Port (0xD6/0x00-03)

Size (Octets)	Field (name)	Value	Notes
1	UNI Port	0x00 to $N-1$	Represents the UNI Port instance. <u>When the value equals to N, it represents all the UNI Port instances.</u>
